from the beginning of chapter i the ocean and its origin looking at the land we divide the surface of the earth into eastern and western hemispheres but looking at the water we make an opposite classification encircle the globe in your library with a rubber band so that it cuts across south america from about porto alegre to lima on one side and through southern siam and the northernmost of the philippine islands on the other and you make hemispheres the northern of which with london at its center contains almost all the land of the globe while the southern with new zealand as its central point is almost entirely water australia and the narrow southern half of south america being the only lands of consequence in its whole area observing the map in this way noticing that besides nearly a complete half world of water south of your rubber equator much of the northern hemisphere also is afloat you are willing to believe the assertion that there is almost three times as much of the outside of the earth hidden under the waves as appears above them the estimate in round numbers is one hundred and fifty million square statute miles of ocean surface

as compared with about fifty million square miles of land on the globe to the people whose speculations in geography are the oldest that have come down to us the earth seemed to be an island around which was perpetually flowing a river with no further shore visible beyond it they thought lay the abodes of the dead this river as the source of all other rivers and waters was deified by the early greeks and placed among their highest gods as oceanus whence our word ocean accompanying or belonging to him there grew up in the fertile imagination of that poetic people a large company of gods and goddesses while men hid their absence of real knowledge by peopling the deep with quaint monsters the word for ocean mare in the latin tongue means by derivation a desert and the greeks spoke of it as the barren brine over these old fables we need not linger all the myths and guesswork that went before history represented the sea as older than the land and told how creation began by lifting the earth above the universal waste of waters the story in genesis is only one of many such stories

by the middle of the 19th century as scientists explored the frontiers of polar regions and the atmosphere the ocean remained silent and inaccessible rozwadowski explores the scientific and cultural history of how this changed
